

Safe. Secure. Portable.

The BIOMEDKEY™ is the solution for healthcare records in the 21st Century.

The **BIOMEDKEY** is a biometric authentication device that holds personal health information in extensive detail, offering the healthcare industry and patients a secure platform on which to store and view all types of electronic medical records.

The Key provides:

- A truly secure, portable device
- Information partitioning enabling only authorized users to view full documents but allows emergency personnel to access critical information immediately
- Access point to remote medical systems for payment, reference, secure communications or application access
- Secure link for healthcare insurers/payers and providers to create channels to confirm services rendered and validate coverage, reducing overbilling

Product Specifications:

- Biometric (fingerprint) authentication
- Back Office Support backs up to last authentication and issues updates
- Storage sizes from 1GB – 32GB
- Preload of healthcare software
- Runs on Windows and Mac OS
- Meets HIPAA and government encryption standards
- SAFE BioPharma certified
- Zero software footprint - no software install required on host computer
- AES 256-bit encryption
- PKI certification validation
- Formats: text, doc, pdf, rtf, wav, mp3, jpeg, gif, tiff
- Bluefly processor
